livestock and meat

FLM 7-81
December 81

WORLD LIVESTOCK NUMBERS, SLAUGHTER, RED MEAT PRODUCTION, CONSUMPTION AND TRADE 1978-82 1/

World red meat supplies are expected to expand by about one-half of 1 percent in 1982, following small declines in both 1981 and 1980. Higher beef production in countries such as the United States and Mexico may about offset a significant decline in beef production in Argentina and smaller pork production in the United States and other countries. Generally weaker economies in many of the developed countries and relatively higher consumption of poultry meat are discouraging demand for red meats, resulting in weaker prices and less international trade. Imports of red meat by the countries covered in this circular are seen falling one-half of 1 percent in 1982, while exports will gain almost 1 percent as certain countries not reviewed, such as several in the Middle East, increase imports.

Livestock Numbers

Cattle numbers are forecast at 947 million head for the start of 1982, a growth of approximately 0.4 percent during 1981. Growth during 1980 was roughly 0.5 percent.

The United States is expected to show the largest increase in numbers at the start of 1982. Cyclical increases in cattle numbers after the sharp 1975-79 liquidation represent the primary force driving the buildup in the U.S. numbers. Economic developments and herd changes in Canada are tending to follow the U.S. pattern

1/ The countries reviewed in this circular are generally considered the major producing and/or trading countries. Totals usually reflect about 50 countries, but the number may vary by commodity. Data for China are not included because they are limited. Data from official Chinese sources indicate 1980 year-end numbers of 305 million hogs (perhaps 40 percent of the world total), 187 million sheep and goats, and 95 million cattle and other large animals. No data are shown for Iran because data for recent years are not comparable with those published earlier.

For further information, contact the Foreign Agricultural Service, U.S. Department of Agriculture, Washington, D.C. 20250. Inquiries relative to production and trade estimates may be directed to the Foreign Production Estimates Division (202/382-8888) and to the Dairy, Livestock and Poultry Division (202/447-8031), respectively.

Except for South Africa, cattle numbers in the major Southern Hemisphere beef producing countries have been generally affected by drought and poor export prices. In early 1981, expectations were for some rebuilding of cattle herds in Australia during the year. However, continued weakness in international beef prices and a prolonged drought resulted in further herd liquidation. Unfavorable prices, plus a drought that commenced in May, caused a further decline in Argentine inventories. In contrast, favorable domestic prices are expected to bring South African cattle numbers up slightly at the beginning of 1982.

In Europe, weak consumer demand resulting from slow economic growth is one of several reasons for reduced expansion prospects for cattle. Limited credit availability for imported feed and short domestic feed supplies are additional obstacles preventing East European producers from further expansion. With its third consecutive poor grain crop, the USSR is expected to maintain its 115 million head inventory level for the third consecutive year. Forage supplies for use during the 1981/82 winter are reported to be somewhat better than last year.

Hog inventories are expected to be unchanged from a year earlier at the beginning of 1982, following a decline of nearly 5 million head during 1980. The stability in numbers is mainly the result of a nearly 3-million-head decline in the United States being offset by increases elsewhere, principally in South America and parts of Asia. That pattern differs from the 1980 to 1981 change which resulted from declines in most regions except the European Community (EC-10).

Brazilian producers, reacting to favorable feed prices and more support by the government, are increasing their swine herd by roughly 1.5 percent this year, a turnaround from last year's decline. In the Far East, Japan is expected to hold 3.5 percent more hogs as producers anticipate more favorable returns in 1982. The Philippines is forecast to continue in 1982 its pattern of adding 400,000 to 500,000 head per year to its inventory. In the EC, herd growth of roughly 4 percent is expected in the Netherlands. With another short grain crop, no significant change is expected in 1982 hog inventories in the USSR, the fourth consecutive year Soviet hog inventories have remained near the same levels.

Sheep inventories are forecast at 724 million head for the start of 1982, up slightly from the 1981 level. The forecast 2.4-million-head buildup in the EC can be partially attributed to the finalization of the Common Agricultural Policy (CAP) for sheepmeat, which gave European producers some additional production incentives. This increase is roughly double the growth typical of the last few years. A 1 percent increase is forecast for Australia as herd recovery commences after the drought.

Slaughter

Cattle slaughter in 1981 is forecast at 192.7 million head. That level of slaughter represents an increase of less than 1 percent, in contrast with 1981's slight decline. With larger opening inventories, the United States is expected to have the largest change. Mexico and Brazil are forecast to have slaughter increases of about 5 percent. Australia and Argentina will each slaughter 5 percent less cattle in 1982.

Hog slaughter is forecast to decline about 1.8 million head (less than 1 percent) in 1982, compared with a decline of almost 8 million head in 1981. Both of these changes are relatively small, compared with the 20-million-head annual increases of the 1977-80 period.

Sheep slaughter is forecast to increase 3.7 million head (roughly 1 percent) in 1982. Over half of the increase is expected to occur in the EC where incentives for production have been strengthened. Slaughter in Australia is forecast to increase somewhat from the rather low 1981 level, while New Zealand slaughter will probably fall from the high level of 1981.

Meat Production

Beef and veal production is forecast to increase less than 1 percent in 1982, reversing 5 years of steady declines. United States beef production is expected to be up 2-4 percent as cattle inventories continue to increase. The forecast production increase in Canada is similar to that of the United States. With a strong economy and good pasture conditions, beef production in Mexico is forecast to increase about 6 percent.

Outside North America, the forecast for most regions, except Brazil, is for beef and veal production to remain at the 1981 level. Argentina and Australia, facing unfavorable prices in export markets and drought conditions in many of the grassland areas, are forecast to produce less beef again in 1982. New Zealand has not had serious weather problems but it does face the same export prices and it too is expecting another small decline. Beef production in the EC in 1982 should stabilize at the 1981 level, which was off 4 percent from the year before.

Pork production, following last years' estimated 1.5-percent decline, is forecast to fall marginally in 1982. In the United States, slow economic growth and plentiful-to-surplus supplies of competitive meats have resulted in weak pork prices. The negative impact of these factors has been partially offset by lower grain prices. However, a decline of 5 percent is seen for United States pork production during 1982. Pork production in Poland may show a modest recovery from the reduced 1981 levels.

Production of mutton, lamb and goat meat is forecast to increase roughly 4 percent in 1982. Over half the increase is forecast for the USSR based on more favorable winter forage supplies and assumed normal 1982 weather in production areas. Australian production is forecast to recover from the drought affected 1981 level. New Zealand production is forecast to decline as a result of the smaller lamb crop. Additional incentives under the CAP are likely the cause of the above normal increase forecast for France.

Total red meat production is forecast to increase less than one-half of 1 percent in 1982. That follows a decline of almost 1 percent in 1981. Most countries are forecasting little growth in either beef or pork production, while others, like the United States, are forecasting offsetting changes. Mexico, with increases forecast for both beef and pork, is a noted exception.

Trade

International trade in meats is an important component in establishing food consumption patterns throughout the world. A review of trade figures indicates a sizable movement of meat to countries other than those covered in this report, where timely reliable data are difficult to obtain. This is especially true for beef, lamb, and mutton exports because of movement to the Middle East.

Exports in 1981 of all red meats fell slightly over 1 percent as a 5 percent decline in beef shipments offset gains in the exports of lamb, mutton and pork. Beef exports dropped largely due to smaller exports from Australia and Ireland, as well as weak world prices resulting from soft economic conditions. The decline in imports by the United States, the EC and Yugoslavia overshadowed increases by the Soviet Union, Poland and Korea. Larger pork imports by Japan, the Soviet Union and Poland caused exports by a number of countries to rise. For lamb and mutton, the greater volume of trade was largely accounted for by larger exports by New Zealand and higher imports by the Soviet Union and Japan.

During 1982 red meat exports should nearly return to 1980 levels with a gain of about one percent, while imports are expected to suffer a somewhat smaller decrease than in 1981. Beef exports may gain 2.5 percent as shipments from Brazil, Ireland and Yugoslavia rise. Pork trade should not show much change, with the probable lower imports by Japan being the most notable feature. Trade in lamb and mutton will likely fall slightly because of lower exports from New Zealand and Australia.

Consumption ^{2/}

Consumption patterns among the various countries have been and are being affected by a number of factors. The weaker economies in many countries and generally high interest rates are causing production, transportation and other costs to rise while demand for meat is slack. Most red meats are also facing increasing competition from less expensive poultry meat. In addition, weather problems in recent years have struck Australia, limiting its production and reducing both consumption and exports of beef, lamb and mutton. The Soviet Union and some of Eastern Europe have tried to maintain consumption in the face of declining production by increasing imports. Political uncertainties continue in areas of the Middle East and Central America, however meat and live animals continue to flow to the Middle East.

^{2/} Since consumption is frequently calculated as a residual in country livestock production statistics, the data in this report only approximate per capita human consumption when total consumption is divided by population figures. Changes in stock levels account for variations between the production and trade data and consumption level.

Estimated consumption of red meats for 1981 in the countries reviewed is down about 1 percent in the aggregate, although individual countries vary. Beef consumption is down about one-half of 1 percent, while pork is down just over 1 percent. Lamb and mutton consumption, with a drop of 3 percent, has the largest decline but accounts for only about 5 percent of all red meat consumption.

Viewing the individual meats, the 1981 decline in beef and veal consumption is largely a result of decreases in Poland, the EC, Brazil, and other countries, which are only partially offset by gains in countries such as the United States, Canada, Japan and Mexico. A sharper decline is occurring in pork consumption primarily in the United States, Poland, Japan and others. Lamb and mutton consumption dropped off sharply in Australia and the United Kingdom, while making small gains in various other countries.

In 1982, total consumption should gain fractionally as beef increases about 1 percent, while pork remains almost constant and lamb and mutton gain over 4 percent. Another gain in beef consumption by the United States, Brazil, Japan, Mexico and others will more than compensate for declines by countries such as Australia and Argentina. For pork, the drop in the United States and a few others is likely to be partially countered by recoveries in Japan and other countries. Lamb and mutton consumption is expected to rebound in Australia, make additional gains in France and remain at depressed levels in the United Kingdom.

While the population increase varies by country, as does total consumption, clearly the average per capita consumption of red meats is declining in 1981 and will continue to do so, although at a slower pace in 1982.
